

Right Angle Holder is easily used with oversized boards using simple tools shown here...

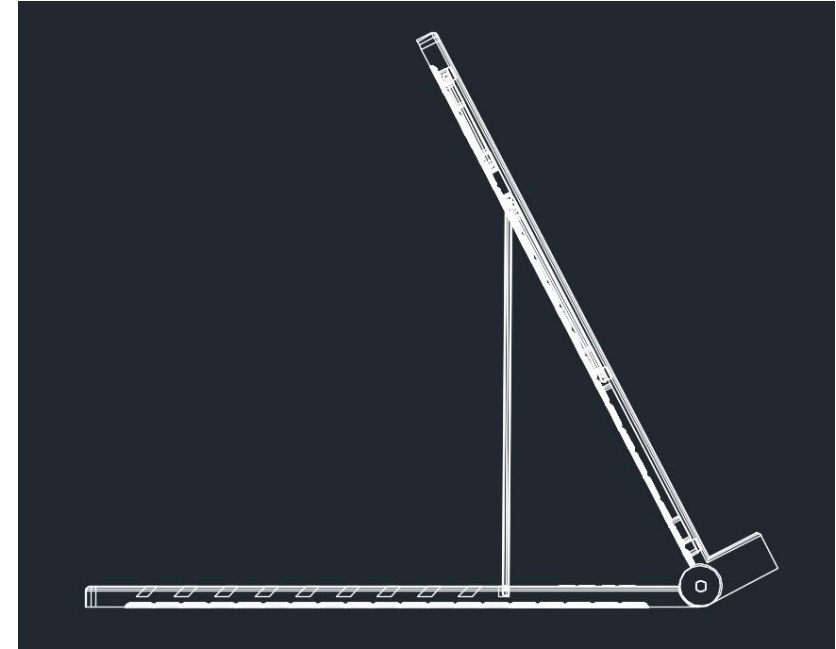

It can be made *temporary* using packing tape or *permanently* with the use of a contact cement.

Applying packing tape as shown by yellow strips is more than enough to *temporary* hold oversize boards in place.

Application of contact cement will *permanently* stick the board and holder together.

Right Angle Holder is an adjustable assistive tool supporting diverse learning and ergonomic needs. Its tri-stand provides 20 angle settings from 5 through 55 degrees.
